

Steps to Analysis

Analysis

Analysis means to look at the structure of something. In English, we are looking at the structure of texts which are constructed using a variety of techniques.

In order to analyse, we follow a procedure:

1. Identify technique
2. Provide an example of that technique
3. Explain the purpose of that technique in this text
4. Analyse the meaning of this technique and what message it sends about a certain topic (e.g. bullying).

Life is a mountain, filled
with switchbacks and
rock slides and few
straight paths to the top
